The Energy-Smart House

Synopsis

Energy efficiency begins at home. Nobody knows this better than homeowners, remodelers, builders, and designers looking to cut back and save more. This is the place to start--"The Energy-Smart House" is a must-have for those concerned about rising home energy costs. Written by builders and energy experts from all over the country, the contributing authors are seasoned professionals whose articles have appeared in "Fine Homebuilding "magazine. Becoming "energy smart" is the goal, and this book details the methods, materials, and technology needed to achieve just that. Along with 200 photos and 50 illustrations, the insight shared from the pros will give readers the most up-to-date ways to keep costs down.

Customer Reviews

This book covers so many energy saving features that were unknown when my house was built. Some of the energy nuggets I found were air sealing and thermal bridging. The use of polyiso for thermal bridging is one job I have. Air sealing will give me a couple of days in the attic. Also my. Windows are installed with just fiberglass. According to this book I also need slow expanding foam to go between the fiberglass and the inside trim. There is to much I have learned from this book to put it all in writing. If you want a complete book on the new energy savings for a new or already built house just go to and get this book!!!! You will learn how you can save energy!!! This book will save you money!!

This is a terrific product, comfortable, functional and nicely proceed.

Perfect

Great!

Is helpful with some Ideas I didn't know about. I did find some of the information redundant of most current construction Technics. Though it has some really go info.
